

Here are some fractions that are equal to 25%:

$$\frac{1}{4} \quad \frac{25}{100} \quad \frac{6}{24} \quad \frac{250}{1000} \quad \frac{13}{52} \quad \frac{7}{28} \quad \frac{4}{16}$$

One thing you might notice about a fraction that is equal to 25% is that the top number (numerator) is always one fourth as big as the bottom number (denominator).

Another way of saying this is that the bottom number is four times as big as the top number.
