

Strategies for finding 25%:

1. To find 25% of a number, find half of it and then find half of that.

This works. For example, to find 25% of 160, find half of 160 which is 80 and then find half of 80 which is 40. 25% of 160 is 40.

2. To find 25% of a number, multiply it by 25.

This doesn't work. If we multiple 160 by 25, we get 4000, which is way too big. The answer should be 40.

3. To find 25% of a number, divide it by 4.

This works. 160 divided by 4 is 40, which is the right answer.

4. To find 25% of a number, divide it by 2 and then divide it by 2 again.

This works. 160 divided by 2 is 80. 80 divided by 2 is 40. That's the right answer.

5. To find 25% of a number, divide it by 25.

This doesn't work. 160 divided by 25 is 6.4, which is too small. The answer should be 40.
