

800 Square Feet of Living Space

1. Below is one possible floor plan for an apartment with 800 square feet of living space. Imagine that you can 'adjust' this apartment to better suit your needs and/or preferences. Think about what size rooms you would want within that 800 square feet. Would you have a huge living room? Would the master bedroom be a lot larger than the second bedroom? In the diagram below, label the length and width of each of the rooms to fit your ideas. *Be sure to check to be sure that the total amount of living space is still 800 square feet!*

2. Now imagine that you could design your own 800 square foot apartment from scratch. Would you have one bedroom or two? Two bathrooms? More closets? Use a sheet of graph paper to sketch your own apartment design using an area of 800 sq. ft. Draw and label your example 'to scale' (one square = how many feet?).
